With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Sven Axsäter ("A Sequential Lot Sizing Heuristic with Optimal Average Performance") is Professor of Transportation and Material Flow Systems at Luleå University of Technology, Sweden. Dr. Axsäter received his degree from the Royal Institute of Technology, Stockholm. Prior to his current position he was Professor at Linköping Institute of Technology. He has also been Visiting Professor at North Carolina State University and is Chairman of the European Working Group for Production and Inventory Control. He has served as consultant to several industrial and governmental organizations. His research interests are in production planning and multi-echelon inventory systems. He has published articles in *Management Science*, *Operations Research*, *European Journal of Operational Research*, *IIE Transactions*, *Operations Research Letters* and *International Journal of Production Research*, among others.

Xi-Ren Cao ("Convergence Properties of Infinitesimal Perturbation Analysis Estimates") received the M.S. degree in Engineering in 1981 and the Ph.D. degree in Applied Mathematics in 1984, both from Harvard University. From January 1984 to April 1986, he was a research fellow at the Division of Applied Sciences, Harvard University. He is currently with Digital Equipment Corporation, Marlboro, Massachusetts. His research interests are in the areas of modeling and performance evaluation of computer systems, the theory and application of queueing networks and discrete event systems, and perturbation analysis. Dr. Cao received the best student paper award in 1982 and the outstanding paper award in 1987, both from the IEEE Control System Society. He is Associate Editor of *IEEE Transactions on Automatic Control*.

Sheng-Lin Chang ("Modeling Time-Dependent Arrivals to Service Systems: A Case in Using a Piecewise-Polynomial Rate Function in a Nonhomogeneous Poisson Process") is Associate Professor in the Department of Industrial Management at National Taiwan Institute of Technology, Taipei, Taiwan (107), Republic of China. He received his Ph.D. in Business Administration from the University of Houston in 1983. His current research interests include simulation, operations management and models of computerized production systems. He is a member of ORSA and TIMS.

Gary D. Eppen ("Determining Safety Stock in the Presence of Stochastic Lead Time and Demand") is Professor of Industrial Administration and FMC Faculty Research Scholar in the Graduate School of Business at The University of Chicago. He holds a Ph.D. in Opera-

tions Research from Cornell University. His current research interests are in modelling ongoing business problems using live data.

Cynthia Fraser ("Competitive Dealing Strategy and Deal Value Escalation") is Associate Professor of Marketing at the College of Business, Kansas State University, Manhattan, Kansas 66502. She holds a Ph.D. in Applied Managerial Economics from The Wharton School, University of Pennsylvania and a B.A. in Music from the Conservatory, University of Missouri-Kansas City. Her current research interests focus upon promotion modelling and decision-making approaches. She has published in *Journal of Marketing*, *Journal of Consumer Research*, and *Journal of Advertising Research* and is a member of TIMS, AMA, and AEA.

James L. Ginter ("Competitive Dealing Strategy and Deal Value Escalation") is Professor of Marketing at the College of Business, Ohio State University, Columbus, Ohio 43210. He holds an MSIA and Ph.D. in Industrial Administration from the Krannert Graduate School of Industrial Administration, Purdue University and a B.S. in Electrical Engineering from Purdue. His current research interests include promotional models, choice models, and corporate strategy. He is a member of TIMS, AMA, ASA, ACR, and Strategic Management Society.

Sunil Gupta ("Resolving a Conflict Situation with a Reference Outcome: An Axiomatic Model") is Associate Professor of Marketing at the Graduate School of Business, Columbia University, New York, New York 10027. He received a Masters degree in Management Studies from the Birla Institute of Technology and Science in Pilani, India, and a Ph.D. in Marketing from the University of California at Berkeley. His research interests include bargaining, cooperative game theory, multiple person decision making and combining forecasts. He has contributed articles in these areas to *Management Science* and *Journal of Business and Economic Statistics*.

Philip Heidelberger ("Convergence Properties of Infinitesimal Perturbation Analysis Estimates") received a B.A. in Mathematics from Oberlin College, Oberlin, Ohio, in 1974 and a Ph.D. in Operations Research from Stanford University, Stanford, California, in 1978. He has been a Research Staff Member at the IBM Thomas J. Watson Research Center in Yorktown Heights, New York since 1978. His research interests include modeling and analysis of computer performance and statistical analysis of simulation output. Dr. Heidelberger is an Associate Editor of *Operations Research*. He is a member of the Operations Research Society of

America, Association for Computing Machinery and IEEE.

Edward P. C. Kao ("Modeling Time-Dependent Arrivals to Service Systems: A Case in Using a Piecewise-Polynomial Rate Function in a Nonhomogeneous Poisson Process") is Professor in the Department of Decision and Information Sciences at the University of Houston, Houston, Texas 77004. He received a Ph.D. in Industrial Engineering from Stanford University, and did post-doctoral study in health services research at Yale during 1971-72. He served as an Associate Editor of *Operations Research* from 1983 to 1988. He is a member of ORSA and TIMS.

Hau L. Lee ("Economic Design of Control Charts with Different Control Limits for Different Assignable Causes") is Associate Professor in the Industrial Engineering and Engineering Management Department of Stanford University. Dr. Lee received his M.Sc. in Operations Research from the London School of Economics, and his Ph.D. in Operations Research from The Wharton School of the University of Pennsylvania. His research interests include multi-echelon inventory models, quality control and health care management systems. Prior to joining Stanford, Dr. Lee was on the faculty of the Department of Decision Sciences at the Wharton School, University of Pennsylvania. Dr. Lee is currently a member of AIIE, TIMS, ORSA and the Institute of Statisticians.

Zvi A. Livne ("Resolving a Conflict Situation with a Reference Outcome: An Axiomatic Model") is a Lecturer in the Faculty of Management, Tel Aviv University, and Visiting Associate Professor in Columbia Business School. A graduate of the Hebrew University (B.S. in Mathematics and Physics, 1975) and MIT (Ph.D. in Operations Research, 1979), his current interest is in studying and modelling bargaining situations. His recent papers on axiomatic bargaining theory appeared in *International Journal of Game Theory*, *Mathematics of Social Sciences* and *Economic Letters*.

R. Kipp Martin ("Determining Safety Stock in the Presence of Stochastic Lead Time and Demand") is Associate Professor of Management Science and Operations Management in the Graduate School of Business, University of Chicago. He received his Ph.D. in Management Science from the University of Cincinnati. Professor Martin has published in *Management Science*, *Mathematical Programming*, *Operations Research*, *Journal of Accounting Research* and other professional journals. Current research interests include the theory of how to construct good mixed integer linear programming models, applications of mixed integer programming models in Operations Management, polyhedral

combinatorics, capacity planning under uncertainty, and bundle pricing models.

Rajan Suri ("Convergence Properties of Infinitesimal Perturbation Analysis Estimates") is currently Associate Professor of Industrial Engineering at the University of Wisconsin-Madison. He received his Bachelors degree from Cambridge University (England) and his M.S. and Ph.D. from Harvard University. His current interests are in modelling and decision-support for manufacturing systems. He is the author of many journal publications and books, and an Associate Editor for *Journal of Manufacturing Systems* and *International Journal of Flexible Manufacturing Systems*. He is also a principal of Network Dynamics, Inc., a firm specializing in software for manufacturing systems.

George Tagaras ("Economic Design of Control Charts with Different Control Limits for Different Assignable Causes") is Lecturer of Decision Sciences at The Wharton School of the University of Pennsylvania. He received a Diploma degree in Mechanical Engineering from the University of Thessaloniki in Greece and M.S. and Ph.D. degrees in Industrial Engineering from Stanford University. His research interests include the economic design of statistical quality control procedures and stochastic models for production and operations management. He is a member of TIMS, Institute of Industrial Engineers and American Society for Quality Control.

Ward Whitt ("A Light-Traffic Approximation for Single-Class Departure Processes from Multi-Class Queues") is a member of the Mathematical Sciences Research Center at AT&T Bell Laboratories, Murray Hill, New Jersey 07974. He received an A.B. in Mathematics from Dartmouth College in 1964 and a Ph.D. in Operations Research from Cornell University in 1968. Before joining Bell Laboratories in 1977, he taught one year in the Department of Operations Research at Stanford University and eight years in the School of Organization and Management (formerly Department of Administrative Sciences) at Yale University. His research interests and publications are primarily in the area of stochastic models, especially queues. He is an Area Editor for *Mathematics of Operations Research* and an Associate Editor of *Queueing Systems*. He is a member of ORSA and IMS.

Michael Zazanis ("Convergence Properties of Infinitesimal Perturbation Analysis Estimates") is currently Assistant Professor of Industrial Engineering at Northwestern University. He received his B.S. from the National Technical University of Athens and his M.S. and Ph.D. from Harvard University. His research interests focus on queueing theory and gradient estimation in discrete event systems.
