With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Sven Axsäter ("Modelling Emergency Lateral Transshipments in Inventory Systems") is Professor of Transportation and Material Flow Systems at Luleå University of Technology, Sweden. Dr. Axsäter received his degree from the Royal Institute of Technology, Stockholm. Prior to his current position he was Professor at Linköping Institute of Technology. He is Chairman of the European Working Group for Production and Inventory Control. He has served as consultant to several industrial and governmental organizations. His research interests are in production planning and multi-echelon inventory systems. He has published articles in various journals including *Management Science*, *Operations Research*, *European Journal of Operational Research*, *IIE Transactions*, *Operations Research Letters* and *International Journal of Production Research*.

Stephen E. Bechtold ("Implicit Modeling of Flexible Break Assignments in Optimal Shift Scheduling") is Professor in the Information and Management Science Department, College of Business, Florida State University. He received his B.S. (Electrical Engineering) from Purdue University, and his M.B.A. (Finance) and D.B.A. (Operations Management) from Indiana University. Dr. Bechtold's previous articles have appeared in *Decision Sciences*, *Journal of Operations Management*, *Management Science*, *International Journal of Operations and Production Management*, *Human Factors*, *Omega*, and other journals. His research interests are focused primarily upon the scheduling and productivity of employees in service operations. Dr. Bechtold currently serves on the Editorial Advisory Board for the *International Journal of Service Industry Management*, and also on the Editorial Review Boards for the *Journal of Operations Management* and *Production and Operations Management*.

Kee H. Chung ("Output Decision under Demand Uncertainty with Stochastic Production Function: A Contingent Claims Approach") is Assistant Professor of Finance, Fogelman College of Business and Economics, Memphis State University. Prior to joining Memphis State University, he taught at the University of Hawaii. He received a B.S. in Industrial Management from Han Yang University, an M.S. in Industrial Engineering from the Korea Advanced Institute of Science and Technology, and a Ph.D. in Finance from the University of Cincinnati. He has published in *Journal of Finance*, *Journal of the Operational Research Society*, *Managerial and Decision Economics*, *Journal of Business Finance and Accounting*, *International Journal of Production Research*, and *Engineering Economist*, among others.

Wade D. Cook ("A Data Envelopment Model for Aggregating Preference Rankings") is a Professor of Management Science in the Faculty of Administrative Studies at York University, Toronto, Canada. He received his Ph.D. in Operations Research from Dalhousie University in 1972. His research interests are in the areas of ordinal and multiple criteria decision models, preference structures, and consensus formation. Dr. Cook has served as a consultant to both private and public organizations. His publications have appeared in a number of academic and professional journals including *Management Science*, *EJOR*, *CORS*, *Operations Research*, and *JORS*.

Michael A. Cusumano ("A Quantitative Analysis of U.S. and Japanese Practice and Performance in Software Development") is the Mitsubishi Career Development Assistant Professor at MIT's Sloan School of Management and director of the MIT Summer Executive Program on Japanese Technology Management. He received an A.B. degree from Princeton University and a Ph.D. from Harvard University, was an instructor at International Christian University in Tokyo during 1976-78, and held two Fulbright fellowships in economics and social science at the University of Tokyo during 1980-1983. Before joining MIT, he was a post-doctoral fellow in the Production and Operations Management Area at the Harvard Business School. Dr. Cusumano's research focuses on strategies for technology development as well as the management of engineering and production operations, especially in Japan. His publications include two books, *The Japanese Automobile Industry: Technology and Management at Nissan and Toyota* (Harvard, 1985), and *Japan's Software Factories* (Oxford, 1990).

Larry W. Jacobs ("Implicit Modeling of Flexible Break Assignments in Optimal Shift Scheduling") is Assistant Professor in the department of Operations Management and Information Systems in the College of Business at Northern Illinois University, DeKalb, Illinois. He received a B.S. in Industrial Management from the University of Akron, an M.B.A. from Ashland University and a Ph.D. in Business Administration from The Florida State University. His research interests are focused on labor productivity enhancement in service firms through the development and use of large-scale optimization models.

Morton I. Kamien ("Subcontracting, Coordination, Flexibility, and Production Smoothing in Aggregate Planning") is the Professor of Entrepreneurship at the J. L. Kellogg School of Management, Northwestern University. Professor Kamien holds a Ph.D. in economics from

Purdue University, 1964. He is the author of many books including *Dynamic Optimization: The Calculus of Variations and Optimal Control in Economics and Management*, coauthored with Nancy L. Schwartz. Professor Kamien has concentrated his research on the economics of industrial organization.

Chris F. Kemerer ("A Quantitative Analysis of U.S. and Japanese Practice and Performance in Software Development") is the Douglas Drane Career Development Assistant Professor of Information Technology and Management at MIT's Sloan School of Management. He received the B.S. from the Wharton School at the University of Pennsylvania and the Ph.D. from Carnegie Mellon University. His research interests are in the measurement and modeling of software development for improved performance, and he has previously published articles on these topics in *Communications of the ACM*, and *IEEE Transactions on Software Engineering*. Dr. Kemerer is a member of TIMS, ACM, and the IEEE Computer Society.

Moshe Kress ("A Data Envelopment Model for Aggregating Preference Rankings") is a senior researcher at the Center for Military Analyses (CEMA). He received his Ph.D. in Operations Research from the University of Texas at Austin in 1981. His research interests are in the areas of ordinal decision models and preference structures and military operations research. He has served as a consultant to agencies both in the private and government (military) sectors. His publications have appeared in a number of Management Science/Operations Research journals, including *Management Science*, *European Journal of Operations Research*, *Naval Research Logistics Quarterly*, and many others.

Pierre L'Ecuyer ("A Unified View of the IPA, SF, and LR Gradient Estimation Techniques") is an associate professor in the Computer Science Department at Laval University, SteFoy, Québec, Canada. He received the B.Sc. degree in Mathematics in 1972, and was a college teacher in Mathematics from 1973 to 1978. He then received the M.Sc. degree in Operations Research and the Ph.D. degree in Computer Science, in 1980 and 1983, respectively, both from the University of Montreal. His research interests are in Markov renewal decision processes, sensitivity analysis and optimization of discrete-event stochastic systems, random number generation, and discrete-event simulation software. He is a member of ACM, IEEE, ORSA and SCS.

Lode Li ("Subcontracting, Coordination, Flexibility, and Production Smoothing in Aggregate Planning") is an Associate Professor at the Yale School of Organization and Management, Yale University. He was formerly an Assistant Professor at the Sloan School of Management, Massachusetts Institute of Technology. Professor Li received a B.S. degree in Mathematics from Fudan University, Shanghai in 1979, an M.S. and Ph.D. in Managerial Economics and Decision Sciences from Northwest-

ern University in 1982 and 1984, respectively. His research interests include operations management and strategy, stochastic models, game theory, and information economics. His work has appeared, among other places, in *Mathematics of Operations Research*, *Journal of Manufacturing and Operations Management*, *Rand Journal of Economics*, and *Journal of Economic Theory*.

John W. Pratt ("Fair and Efficient Division of the Winsor Family Silver") is Professor of Business Administration at Harvard Business School. He was educated at Princeton and Stanford, specializing in mathematics and statistics. Editor of the *Journal of the American Statistical Association* from 1965 to 1970, he is a fellow of five professional societies and has chaired National Academy of Sciences committees on environmental monitoring, census methodology, and the future of statistics. His recent research has been on risk aversion, risk sharing incentives, and the nature and discovery of stochastic laws, statistical relationships that describe the effects of decisions.

Eric Smeitink ("A Note on Operating Characteristics of the $(S-1, S)$ Inventory System with Partial Backorders and Constant Resupply Times") holds an M.S. in Applied Mathematics from the Twente University of Technology, Holland. Currently he is working on a Ph.D. in Operations Research at the Free University Amsterdam. His research interests include maintenance optimisation, inventory theory and queueing theory.

Christopher S. Tang ("Reducing Separable Convex Programs with Tree Constraints") is affiliated with the John Anderson Graduate School of Management at UCLA as an Assistant Professor of Management Science. He received his B.Sc. (honors) in Mathematics from King's College, University of London, his M.A. in Statistics, and his Ph.D. in Management Science from Yale University. His current research interests include production planning, manufacturing system design, and capacity planning. His articles have appeared in *Management Science*, *Operations Research*, and *European Journal of Operations Research*.

Richard J. Zeckhauser ("Fair and Efficient Division of the Winsor Family Silver") is Frank P. Ramsey Professor of Political Economy at the John F. Kennedy School of Government, Harvard University. His research focuses on microeconomic theory, with an emphasis on incentives and uncertainty, and on policy issues related to health, the environment, human resources, and financial markets. Current projects address the role of unions in the health sector, incentive mechanisms to foster international cooperation in the control of greenhouse gas emissions, and the behavioral determinants of financial market behaviors. Coauthor of *A Primer for Policy Analysis* and *Demographic Dimensions of the New Republic*, he is the editor of the forthcoming *The Strategy of Choice*.
