With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Jonathan F. Bard ("Arc Reduction and Path Preference in Stochastic Acyclic Networks") is Associate Professor of Operations Research in the Mechanical Engineering Department at the University of Texas at Austin. He holds a D.Sc. in Operations Research from the George Washington University, and previously taught at the University of California, Berkeley, and Northeastern University. His current research interests are in hierarchical decomposition, multiple criteria decision making, and the design and analysis of manufacturing systems. Dr. Bard is an active member of TIMS, ORSA and IIE. His research has been published in a wide variety of technical journals.

James E. Bennett ("Arc Reduction and Path Preference in Stochastic Acyclic Networks") is a Captain in the U.S. Air Force stationed at Kirkland AFB in New Mexico. He received a Ph.D. from the University of Texas at Austin in Operations Research. His undergraduate degree is in Mathematics from the University of Mississippi. Current research interests include stochastic networks, and large scale simulation modeling.

Kathleen R. Conner ("Software Piracy: An Analysis of Protection Strategies") is Assistant Professor in the Department of Management at the Wharton School, University of Pennsylvania, Philadelphia, PA 19104. She received her Ph.D. from the Anderson Graduate School of Management, UCLA, in 1986. Her primary research interests include business strategy, industry analysis, and strategy in high technology industries. She has published in the *Strategic Management Journal*. At Wharton, she teaches business policy at the M.B.A. level.

Brian R. Golden ("New Organizational Forms for Enhancing Innovation: The Case of Internal Corporate Joint Ventures") is Assistant Professor of Management, University of Texas at Austin. He received his B.S. in Economics from Oberlin College, and his M.S. and Ph.D. in Organization Behavior from Northwestern University. His current research interests focus on the relationship between corporate and division management and the strategic planning process, and the market and organizational characteristics influencing strategic alliances for innovation.

Daniel Granot ("Optimal Sequencing and Resource Allocation in Research and Development Projects") is Professor in the Management Science Division in the Faculty of Commerce and Business Administration at the University of British Columbia. He received B.Sc. and M.Sc. degrees from the Technion, Israel, and a Ph.D. degree from the University of Texas at Austin (1974). His research interests include

game theory and combinatorial optimization, and he is a member of TIMS, ORSA, CORS and the Mathematical Programming Society.

Minhi Hahn ("Advertising Cost Interactions and the Optimality of Pulsing") is Assistant Professor of Marketing at Korea Advanced Institute of Science and Technology, Seoul, Korea. He holds his B.A. in Management from Seoul National University, his M.S. in Industrial Engineering from Korea Advanced Institute of Science, and his Ph.D. in Marketing from Northwestern University. He was a visiting assistant professor at Kellogg Graduate School of Management, Northwestern University, from 1985 to 1986. His recent research interests include modeling advertising responses and forecasting new product adoptions.

Jin-Sok Hyun ("Advertising Cost Interactions and the Optimality of Pulsing") is currently a doctoral candidate at Korea Advanced Institute of Science and Technology (KAIST). He received his B.A. in Management from Sogang University, Seoul, Korea, in 1986, and M.S. degree in Management Science from KAIST in 1988. His current research interests focus on studies of advertising responses and corresponding strategies, conjoint analysis, and market structure analysis. He is a member of American Marketing Association, Korean OR/MS Society, and Korean Marketing Association.

Edward P. C. Kao ("Modeling a Multiprocessor System with Preemptive Priorities") is a Professor in the Department of Decision and Information Sciences at the University of Houston, Houston, Texas 77204-6282. He received a Ph.D. in Industrial Engineering from Stanford University and did postdoctoral study in health services research at Yale University during 1971-1972. He served as an Associate Editor of *Operations Research* from 1983-1987. He is a member of ORSA and TIMS.

Kumar S. Narayanan ("Modeling a Multiprocessor System with Preemptive Priorities") is a member of Technical Staff at AT&T Bell Laboratories, Holmdel, New Jersey 07733. He holds a Ph.D. in Operations Research and an M.B.A. in Management Science from University of Houston. He received his B.S. in Mathematics and M.S. in Applied Mathematics from University of Madras, India. His current research interests include applications of queueing theory, stochastic modeling, and optimization. He has coauthored articles that are to appear in *ORSA Journal on Computing* and *European Journal of Operational Research*.

Edward R. Petersen ("An Information Processing Model of a Police Organization") is Professor at Queen's University. He received his

Ph.D. from Stanford University, M.S. from the California Institute of Technology, and B.Sc. from the University of Alberta, in Operations Research. He researches primarily in the area of railway modelling and analysis. He has published extensively on models of train operations and scheduling, yard switching, network models of rail systems, railway costing and pricing in *Management Science*, *Operations Research*, *INFOR*, *Transportation Science* and *Transportation Research*. He is a former chairman of the Ph.D. Program in Management. He has also served on the editorial board of the *Canadian Journal of Operational Research and Information Processing*. He is director of the Canadian Institute of Guided Ground Transport and Associate Editor of *Transportation Science*.

Hasan Pirkul ("The Maximal Covering Location Problem with Capacities in Total Workload") is an Associate Professor of Management Information Systems at The Ohio State University where he is the Director of the Management Information Systems program. He received the M.S. degree in Management Science and the Ph.D. degree in Computers and Information Systems from the Graduate School of Management, University of Rochester. His research interests are in the areas of distributed computer systems, telecommunication networks, knowledge based systems, decision support systems and mathematical programming. He has published extensively in journals including *Management Science*, *Computers & Operations Research*, *Decision Sciences*, *Decision Support Systems*, and the *European Journal of Operational Research*. He is a member of the Editorial Boards of *Accounting Review*, *Computers & Operations Research*, *Information Resources Management Journal*, and *Journal of Microcomputer Systems Management*. Dr. Pirkul is a member of ACM, IEEE, IEEE Computer Society, TIMS, ORSA, Information Resources Management Association and Regional Science Association.

Richard Rumelt ("Software Piracy: An Analysis of Protection Strategies") is Associate Professor of Business Policy and Planning at UCLA's Anderson Graduate School of Management, where he is the Co-Chair of the Policy Area. He received his B.S. and M.S. degrees in Electrical Engineering from the University of California, Berkeley, in 1963 and 1965. He has worked as a systems engineer at the Jet Propulsion Laboratory, and has been a faculty member at the Harvard Business School. He is the author of *Strategy, Structure and Economic Performance*, and his articles have appeared in the *RAND Journal of Economics*, the *Strategic Management Journal*, the *Academy of Management Journal*, and in a number of collections on strategy.

David A. Schilling ("The Maximal Covering Location Problem with Capacities on Total Workload") is Professor and Chairman in the Faculty of Management Science at The Ohio

State University. He received a Ph.D. in Operations Research from The Johns Hopkins University. His research interests include facility location analysis, management information systems, multicriteria decision making, model-based decision support systems, and group decision making. He has published articles in *Management Science*, *Decision Science*, *European Journal of Operational Research*, *MIS Quarterly*, *Geographical Analysis*, *Transportation Science*, and *Omega*, among others.

Stephen M. Shortell ("New Organizational Forms for Enhancing Innovation: The Case of Internal Corporate Joint Ventures") is the A. C. Buehler Distinguished Professor of Hospital and Health Services Management and Professor of Organization Behavior at the J. L. Kellogg Graduate School of Management, Northwestern University. His research interests include strategic change, strategy implementation and organizational performance. His most recent book is *Strategic Choices for America's Hospitals: Managing Change in Turbulent Times*.

Betram W. Simms ("An Information Processing Model of a Police Organization") is Chairman of the Engineering and Management Department at Royal Military College, Kingston, Ontario, Canada. His major research is in the area of system modelling of criminal investigations. He has published on models of police departments and the engineering economics of railways. They have appeared in the *Journal of Criminal Justice*, the *European Journal of Operational Research*, and *The Canadian Police College Journal*. He has also developed and published, with Professors Neave and Petersen, FORCEMOD, a management game for police management personnel.

Edward J. Zajac ("New Organizational Forms for Enhancing Innovation: The Case of Internal Corporate Joint Ventures") is an Assistant Professor at the J. L. Kellogg Graduate School of Management, Northwestern University. He received his Ph.D. in Organization and Strategy from the Wharton School, University of Pennsylvania. His research on interorganizational strategies, CEO/Board relations, and strategic adaptation has been published in the *Strategic Management Journal*, the *Academy of Management Journal*, and *Organization Studies*, and he is currently an editorial board member of the *Academy of Management Review*, the *Strategic Management Journal*, and *Organization Science*.

Dror Zuckerman ("Optimal Sequencing and Resource Allocation in Research and Development Projects") is Professor in the Business School of the Hebrew University of Jerusalem. He received a B.Sc. degree from the Hebrew University, M.Sc. degree from the Technion in Israel and Ph.D. degree from Cornell University (1976). His research interests include applied probability, reliability theory, labor economics and R & D models.
