With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Robert F. Bordley ("SSB and Weighted Linear Utility as Expected Utility with Suspicion") is Manager, Decision Support Systems Section, General Motors Research Labs. His section at General Motors uses influence diagrams, marketing science and risk/benefit analysis to address a wide variety of problems in product design, marketing, service, regulation and inventory. He has published more than 30 papers on problems in utility theory, demand forecasting, election theory and forecast-combination theory in such journals as *Operations Research*, *Management Science*, *American Political Science Review*, *Journal of Business and Economic Systems*, *Journal of Economic Theory*.

Gerard M. Campbell ("Cyclical Schedules for Capacitated Lot Sizing with Dynamic Demands") is Assistant Professor of Operations and Information Management in the School of Business Administration at the University of Connecticut. He received a B.S. in Mechanical Engineering from Columbia University, an M.B.A. from the University of Connecticut, and a Ph.D. from Indiana University. Prior to attending Indiana, he worked as an equipment engineer for IBM. Currently, his primary research interests center around scheduling for production and distribution systems.

Jack Hayya ("Sole versus Dual Sourcing in Stochastic Lead-Time (s , Q) Inventory Models") is Professor of Management Science at Pennsylvania State University. He has a B.S. in Civil Engineering from the University of Illinois, an M.S. in Management from California State, Northridge, and a Ph.D. in Business Administration from UCLA. He is an Associate Editor for *Decision Sciences*, Area Editor for the *Journal of Operations Management Society*, and serves on the Editorial Board of the *Journal of Operations Management*.

Gordon B. Hazen ("SSB and Weighted Linear Utility as Expected Utility with Suspicion") is Associate Professor of Industrial Engineering and Management Sciences at Northwestern University. His areas of research interest include statistical decision theory and decision analysis; utility and preference models; uncertainty modeling in decision analysis and artificial intelligence; multiple criteria decision making; and stochastic and decision analytic applications in medical decision making. His papers have appeared in such journals as *Operations Research*, *Management Science*, *Theory and Decision*, *Mathematics of Operations Research*, and *Journal of Optimization Theory and Applications*. He is an associate editor for *Management Science* and was associate editor for the 1988

special issue of *Naval Research Logistics Quarterly* on multiple criteria decision making.

Jean-Francois Hennart ("The Transaction Costs Theory of Joint Ventures: An Empirical Study of Japanese Subsidiaries in the United States") is Associate Professor of International Business at the University of Illinois at Urbana-Champaign. His main research interest is transaction cost theory and its application to international business institutions.

Donald L. Keefer ("Resource Allocation Models with Risk Aversion and Probabilistic Dependence: Offshore Oil and Gas Bidding") is Associate Professor of Management Science in the Department of Decision and Information Systems, College of Business, Arizona State University. He holds a B.S. from Carnegie Mellon University and an M.S. from Stanford University in Mechanical Engineering and an M.S. and a Ph.D. from The University of Michigan in Industrial and Operations Engineering. He spent 14 years with Gulf Oil Corporation, where he specialized in decision analysis applications, and one year with Chevron Corporation before joining academia. His publications have appeared in *Management Science*, *Operations Research*, *IEEE Transactions*, and other OR/MS and engineering journals. His research interests center on decision analysis, particularly on models for resource allocations involving major uncertainties and on approximation methods in probabilistic modeling.

Vincent A. Mabert ("Cyclical Schedules for Capacitated Lot Sizing with Dynamic Demands") is Professor and Chair in Operations Management at the Graduate School of Business, Indiana University. Prior to joining the Indiana University faculty, he held positions with Purdue University, Bowling Green State University, Ohio State University and Arthur Andersen & Co. His publications include articles in *Management Science*, *Journal of Bank Research*, *Journal of Operations Management*, *Production and Inventory and Decision Sciences*. He conducts research and consults in the areas of forecasting, manpower planning, and work force and job scheduling for manufacturing and service oriented organizations. He is a senior member of IIE and is past Director of the Banking and Financial Services Division, and has authored or coauthored three IIE publications. He is a Fellow of the Decision Sciences Institute.

Marvin B. Mandell ("Modelling Effectiveness-Equity Trade-offs in Public Service Delivery Systems") is Associate Professor of Policy Sciences at the University of Maryland Baltimore County. He received his B.S. degree from the

State University of New York at Buffalo and his Ph.D. from Northwestern University. His articles have appeared in *Evaluation Review*, *Knowledge, Knowledge in Society*, and several other journals.

J. Keith Ord ("Sole versus Dual Sourcing in Stochastic Lead-Time (s, Q) Inventory Models") is David McKinley Professor of Business Administration, Chairman of the Department of Management Science and Professor of Management Science and Statistics at Pennsylvania State University. He has published extensively in many professional journals and is coauthor with Alan Stuart of *Kendall's Advanced Theory of Statistics*. His research interests include forecasting and stochastic modeling.

Andrew Pan ("Sole versus Dual Sourcing in Stochastic Lead-Time (s, Q) Inventory Models") is Associate Professor of Business Administration at the National Central University, Taiwan. He has a B.S. in Industrial Management from the Min-Chi Institute of Technology, an M.B.A. from the University of Scranton, and a Ph.D. in Operations Management from Pennsylvania State University.

Ranga Ramasesh ("Sole versus Dual Sourcing in Stochastic Lead-Time (s, Q) Inventory Models") is Assistant Professor of Decision Sciences at Texas Christian University, where he teaches courses in Operations Management and Management Science. He received a Ph.D. in Operations Management from Pennsylvania State University, an M.B.A. in Finance from the University of Rochester, and an M.E. in Mechanical Engineering from the Indian Institute of Science. He is a member of TIMS, ORSA and Decision Sciences Institute.

Debashish Sarkar ("Variance Effects in Cyclic Production Systems") is a member of the Technical Staff at AT&T Bell Laboratories, Holmdel, New Jersey. He received his Ph.D. in Operations Research from MIT and was with the Engineering Computations and Operations Research group of DuPont at Newark, Delaware from 1981 to 1983. His research interests include modelling manufacturing systems, computer networks, cyclic queuing, credit management and decomposition techniques.

Paul Schweitzer ("Optimizing Processing Rates for Flexible Manufacturing Systems") is Professor at the William E. Simon Graduate School of Business Administration of the University of Rochester, Rochester, New York. He has been an Associate Editor of *Operations Research Letters*, *Operations Research*, and *IIE Transactions*. He is the author of more than 135 research articles in such journals as *Operations*

Research, *Management Science*, *J. Math. Anal. Appl.*, *Math. of Oper. Res.*, *IEEE Trans. Commun.*, *IIE Trans.*, *Int. J. Prod. Res.*, *J. Appl. Probab.*, *Stochastic Models*, *Applied Math. & Comp.*, *Stochastic Processes and their Applications*, *Zeit. für O.R.*, *R.A.I.R.O.*, *INFOR*, *Oper. Res. Letters*, and *J. Opt. Th. Appl.*, as well as contributions to more than 20 books. His current research activities include Computer Integrated Manufacturing (CIM), computer performance evaluation, stochastic optimization, and aggregation theory. He is the coinventor of mean value analysis, a widely-used technique for the evaluation of computer systems and flexible manufacturing systems.

Abraham Seidmann ("Optimizing Processing Rates for Flexible Manufacturing Systems") is an Associate Professor and area coordinator of Computers and Information Systems and Operations Management at the William E. Simon Graduate School of Business Administration at the University of Rochester, Rochester, New York. He is a Department Editor on Manufacturing and Automated Production in *IIE Transactions* and an Associate Editor for *Production Planning and Controls*, *Journal of Intelligent Manufacturing* and *International Journal of Flexible Manufacturing Systems*. Dr. Seidmann is the author of many research articles published in such journals as *IIE Transactions*, *Operations Research*, *International Journal of Production Research*, *Management Science* and *IEEE Transactions*. His current research and consulting activities include Management and Analysis of Automated Production Systems, Computer Integrated Manufacturing (CIM), Management Information Systems, and Stochastic Models for Scheduling and Control.

Willard I. Zangwill ("Variance Effects in Cyclic Production Systems") is a professor of Management Science at Graduate School of Business, University of Chicago. In addition, he has been on the faculties of University of California, Berkeley, American University, University of Illinois and a visiting professor at Tokyo Science University. He has written three books and numerous academic articles, 14 of which appeared in *Management Science*. His areas of publication include production and inventory, nonlinear programming, fixed point and equilibria theory, the learning curve and innovation, cyclic queues, computer networks, management operations and a variety of applications. He is a former Departmental Editor of *Management Science*. After receiving his A.B. from Columbia, he obtained an M.S. and Ph.D. from Stanford.
