With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Klaus Brockhoff ("R&D Cooperation between Firms—A Perceived Transaction Cost Perspective") is Professor of Management Science at the Institute for Research in Innovation Management and Director of the Ph.D. program, "Management Science for Technology and Innovation," at the University of Kiel, Germany. He graduated in Economics at the University of Bonn, in Business Administration at the University of Münster, and received his doctoral degree from the University of Bonn. He is the author of 14 books and more than 150 articles published in national and international journals. He is a member of TIMS and other scientific associations, and serves presently as the President of the Verband der Hochschullehrer für Betriebswirtschaft, a professional association of university professors of business association. His research interests include product policy and management of research and development.

Richard L. Daniels ("Analytical Evaluation of Multi-Criteria Heuristics") is Associate Professor of Quantitative Methods and Operations Management at the Fuqua School of Business, Duke University. He received a B.A. from Northwestern University and a Ph.D. from UCLA. His current research interests include multi-objective production scheduling, resource flexibility and its effect on job sequencing, and decision analysis. His articles have appeared in *Management Science*, *Operations Research*, *Naval Research Logistics* and *European Journal of Operational Research*.

Janny Leung ("A New Graph-Theoretic Heuristic for Facility Layout") is Assistant Professor at the College of Business and Public Administration at the University of Arizona in Tucson. She holds an S.B. from Radcliffe College, an M.A. from Oxford University and a Ph.D. in Operations Research from MIT. Her research interests include integer programming, manufacturing systems design and production planning. Her articles have appeared in *Mathematical Programming*, *Transportation Science* and *European Journal of Operational Research*.

Haim Levy ("Stochastic Dominance and Expected Utility: Survey and Analysis") is Professor of Finance at the Hebrew University of Jerusalem and the University of Florida. He is an Associate Editor for *Management Science*, *Financial Review* and *Journal of Financial and Quantitative Analysis*, and served as Editor of *Research in Finance* and Associate Editor of the *Journal of Finance* and *Journal of Banking and Finance*. He is the author or coauthor of numerous textbooks, monographs and articles, primarily in the areas of corporate finance, port-

folio selection and investment decisions under uncertainty.

Olivia R. Liu Sheng ("Analysis of Optimal File Migration Policies in Distributed Computer Systems") received the B.S. degree from the National Chiao Tung University in Taiwan, R.O.C., in 1981 and the Master's and Ph.D. degrees in Computers and Information Systems from the University of Rochester in 1983 and 1986, respectively. She has been Assistant Professor of Management Information Systems at University of Arizona since 1985 and is a consultant to Toshiba Corporation on database design for medical image data. Her current research interests include analysis and design of distributed, heterogeneous and multimedia database and knowledge systems, automation of database and knowledge-base design and computer-mediated communication support. Dr. Liu Sheng is a member of ACM, IEEE, ORSA and TIMS.

Marian Chapman Moore ("Signals and Choices in a Competitive Interaction: The Role of Moves and Messages") is Associate Professor of Marketing at the Fuqua School of Business, Duke University, where she serves as Area Coordinator for Marketing. She received a B.A. from the College of William and Mary, an M.S. from Virginia Commonwealth University, and a Ph.D. from the University of California, Los Angeles. Her research time is divided between understanding how managers assess their competition and factor those assessments into their own decision making and understanding how emotions influence consumers' reactions to advertisements. Her papers have appeared in *Journal of Marketing Research*, *Journal of Consumer Research*, and *Journal of Risk and Uncertainty*.

S. Rajagopalan ("Deterministic Capacity Expansion under Deterioration") is Assistant Professor in the School of Business at the University of Southern California. He received a B.Tech. degree from the Indian Institute of Technology, a P.G.D.M. from the Indian Institute of Management and a Ph.D. in Operations from Carnegie Mellon University. His current research interests include capacity and technology acquisition, production planning and control, and related resource allocation problems. He has published in *Journal of Manufacturing and Operations Management*, *Operations Research* and *Interfaces*. He is a member of TIMS and ORSA.

D. J. White ("A Min-Max-Min Approach to Solving a Stochastic Programming Problem with Simple Recourse") is Professor and Head of the Department of Decision Theory at Manchester University. He was Professor and

Head of the Department of Operational Research at Strathclyde University and Chairman of the Department of Systems Engineering at the University of Virginia. His main interests are in the mathematics of operations research/decision theory, and he is the author of about

150 publications, including 13 books. He received an M.A. in Mathematics from Oxford University, M.Sc., Ph.D. and D.Sc. in Operational Research from Birmingham University, and M.A. in Economics from Manchester University.
