With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

ABOUT AUTHORS

Morris A. Cohen ("Pooling in Two-Location Inventory Systems with Non-negligible Replenishment Lead Times") is Matsushita Professor of Manufacturing and Logistics at The Wharton School of the University of Pennsylvania. He is actively involved in research in manufacturing strategy, global supply chain management, and the interface between manufacturing, marketing and distribution. He holds a B.A.Sc. in Engineering Sciences from the University of Toronto, and an M.S. in Industrial Engineering and Management Science and a Ph.D. in Operations Research from Northwestern University. He is currently an Area Editor for Manufacturing, Production, and Scheduling of *Operations Research*.

Maqbool Dada ("A Two-Echelon Inventory System with Priority Shipments") is Assistant Professor in the Krannert School of Management, Purdue University. He received his Ph.D. in Operations Management from the Massachusetts Institute of Technology. His research interests include inventory systems, quality control and health care systems.

Randolph Hall ("A Note on Bounds for Direct Shipping Cost") is Assistant Professor of Industrial Engineering and Operations Research at the University of California at Berkeley. His research interests are in logistics, distribution and transportation planning. Dr. Hall is the author of *Queueing Methods for Services and Manufacturing*. He holds a B.S. in Industrial Engineering and Ph.D. in Civil Engineering, both from the University of California at Berkeley. Prior to joining the faculty at Berkeley, Dr. Hall was a Senior Research Engineer at General Motors Research Laboratory.

Ehud Kalai ("Optimal Service Speeds in a Competitive Environment") is the Charles E. Morrison Professor of Decision Sciences at the J. L. Kellogg Graduate School of Management and Professor of Mathematics at Northwestern University. He holds a B.A. degree (Mathematics) from the University of California, Berkeley, and M.S. and Ph.D. degrees (Mathematics, Statistics, and Operations Research) from Cornell University. His publications are in the areas of decision theory, game theory, and mathematical economics. He is the current editor of *Games and Economic Behavior*, Academic Press.

Morton I. Kamien ("Optimal Service Speeds in a Competitive Environment") is the Joseph and Carol Levy Professor of Entrepreneurship at the Kellogg Graduate School of Management, Northwestern University. He received a B.A. in Economics from City College of New York and a Ph.D. in Economics from Purdue University. His current research interests are in research joint

ventures, economics of mergers and differential games. His is the coauthor of *Dynamic Optimization* (North Holland, 1991) and *Market Structure and Innovation* (Cambridge University Press, 1982).

Son Ku Kim ("Conditional Monitoring Policy under Moral Hazard") is Visiting Assistant Professor of Economics at UCLA, Los Angeles, California 90024. After receiving his B.A. in International Economics from Seoul National University, Seoul, Korea, in 1980, he received his M.A. in 1986 and Ph.D. in 1991 from UCLA. His current research interests are in the areas of information economics, agency contracts, and industrial organization.

Jack P. C. Kleijnen ("Regression Metamodels for Simulation with Common Random Numbers: Comparison of Validation Tests and Confidence Intervals") is Professor of Simulation and Information Systems at the Katholieke Universiteit Brabant (Tilburg University) in Tilburg, Netherlands, where he received his degree in Management Science. He spent several years in the U.S.A. at different universities and research institutes. He published four books and more than 100 articles on simulation, mathematical statistics, operations research, computer science and information systems. His first book received a Lanchester Prize Honorable Mention from ORSA in 1975, and was translated into Russian.

J. B. Lasserre ("An Integrated Model for Job-Shop Planning and Scheduling") was born in France. He graduated from Ecole Nationale Supérieure d'Informatique et de Mathématiques Appliquées de Grenoble (France) in 1976 and received the Docteur-Ingénieur and Docteur d'Etat degrees, both from Université Paul Sabatier, Toulouse (France) in 1978 and 1984, respectively. During the academic years 1978–1979 and 1985–1986, he was a Post-Doc INRIA and NSF, in the Electrical Engineering Department at the University of California at Berkeley. Since 1980, he has been with the Laboratoire d'Automatique et d'Analyse des Systèmes du CNRS, Toulouse (France). His current research interests are in constrained linear systems, Markov decision processes and control theory applied to production planning and scheduling.

Sang M. Lee ("A Multiple-Objective Programming Technique for Structuring Tax-Exempt Serial Revenue Debt Issues") is University Eminent Scholar and Regents Distinguished Professor of Management at the University of Nebraska-Lincoln. He has published 24 books and over 150 articles in most major journals of management, including *Management Science*. He has served as President of the Decision Sciences Institute and President of the Pan-Pacific

Business Association. His current research interests include multiple-objective decision support, neural networks, total quality management for global competitiveness, and market economics transition for new democratic nations.

Herbert Moskowitz ("Control Charts in the Presence of Data Correlation") is the Lewis B. Cullman Distinguished Professor of Manufacturing Management and is Director of the Center for the Management of Manufacturing Enterprises at the Krannert Graduate School of Management at Purdue University. His area of specialization is management science and quantitative methods with interests in judgment and decision making and quality control. Dr. Moskowitz is the coauthor of four texts and has published over 80 articles in the areas of decision making, optimization, management science and quality control in refereed academic journals. He is an associate editor of *Decision Sciences*, *Journal of Behavioral Decision Making* and *Journal of Interdisciplinary Modeling and Simulation*, and has been a special associate editor of *Management Science*. He is a Fellow and past Secretary of the Decision Sciences Institute and also served as a Vice-President and Member of the Executive Board. He also holds positions with TIMS and ORSA, and is a member of the American Society for Quality Control Standards Council.

Robert Plante ("Control Charts in the Presence of Data Correlation") is Professor of Management at the Krannert Graduate School of Management at Purdue University. His research interests are the design and application of operations research models in quality assurance and production/inventory problems. Much of his research is in the areas of auditing, quality control and combinatorial optimization. His work has been published in a number of journals, including *Management Science*, *Operations Research*, *Decision Sciences*, *Journal of the American Statistical Association*, and *Accounting Review*.

Amy v. Puelz ("A Multiple-Objective Programming Technique for Structuring Tax-Exempt Serial Revenue Debt Issues") is Assistant Professor of Management Information Systems and Decision Sciences at Memphis State University. She holds a Ph.D. in Management Science from the University of Nebraska and a B.A. in Mathematics from Colorado College. Her current research interests include municipal bonds and mathematical programming applied to market microstructure analysis.

Michael Rubinovitch ("Optimal Service Speeds in a Competitive Environment") is Israel Pollak Professor of Industrial Engineering and Management at the Technion Israel Institute of Technology, Haifa, Israel. He received his bachelors degree from the Technion and his Ph.D. from the School of Operations Research and Industrial Engineering at Cornell University. His current research is on queuing and on probabilistic models for chemical engineering processes. At present, he is a visiting professor at the Department of Managerial Economics and

Decision Sciences, J. L. Kellogg Graduate School of Management, Northwestern University.

Shaler Stidham, Jr., ("Pricing and Capacity Decisions for a Service Facility: Stability and Multiple Local Optima") received his Ph.D. in Operations Research from Stanford University in 1968. He is Professor and Chair of the Department of Operations Research at the University of North Carolina at Chapel Hill and taught previously at Cornell University and North Carolina State University. He has visited Aarhus, Stanford, Technical University of Denmark, Bell Laboratories, Cambridge (Overseas Fellow, Churchill College), and INRIA. His research has mainly been on optimal design and control and distribution-free analysis of queues. He has been Associate Editor of *Management Science* and *Operations Research*, Area Editor for *Operations Research*, and is currently Associate Editor of *QUESTA*. He was program co-chair of the Applied Probability Conference (1988) and TIMS XXIX (1989), and was chair of the TIMS/ORSA College/Technical Section on Applied Probability (1990–91).

Yoon S. Suh ("Conditional Monitoring Policy under Moral Hazard") is Assistant Professor of Accounting at John E. Anderson Graduate School of Management, UCLA, Los Angeles, California 90024. After receiving his B.A. in Economics from Seoul National University, Seoul, Korea, in 1977, he received his M.P.A. in 1981 and Ph.D. in Accounting from the University of Texas at Austin in 1985. His current research interests are in the areas of information economics and agency contracts with an emphasis on applications to accounting. Among his publications are articles in *Journal of Economic Theory*, *Journal of Accounting Research*, *Journal of Accounting and Economics* and *Management Science*.

George Tagaras ("Pooling in Two-Location Inventory Systems with Non-negligible Replenishment Lead Times") is Assistant Professor of Technology Management at INSEAD in Fontainebleau, France. He received a Diploma in Mechanical Engineering from the University of Thessaloniki in Greece and an M.S. and a Ph.D. in Industrial Engineering from Stanford University. His current research concentrates on economic models of statistical quality control and inventory distribution systems. His articles have appeared in *Management Science*, *IIE Transactions*, *Naval Research Logistics*, *Journal of Quality Technology*, *Journal of the Operational Research Society*, and other technical journals.

Don G. Wardell ("Control Charts in the Presence of Data Correlation") is Assistant Professor of Production and Operations Management at the College of Business and Economics at the University of Idaho. He received his Ph.D. in Management Science from Purdue University, and his B.S. and M.S. in Metallurgical Engineering from the University of Utah. His research interests focus on quantitative methods applied to operations management, especially to quality control and management.
