With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

The book is written in a quite unconventional fashion, much more like a very individualistic monograph than a standard reference book for intermediate reading. The reviewer is of the opinion that the contents of the book, which is aimed at engineers and economists, does not warrant such capriciousness. Also, as regards standard notations, list of references, subject index, and the like, ample room is left for improvement. Since Dr. Gebelein's book has significant merits overall, this hopefully may be done at the occasion of a second edition, perhaps in English.
