With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Volume 38—2004

Subject Index

A

Air traffic management, 19–32
Air transportation, 19–32, 107–118, 357–368
Airline operations, 107–118
Airline scheduling, 19–32
Airports, 19–32
Approximate dynamic programming, 399–419
Assignment problem, 420–433
Automated guided vehicle, 224–234

B

Bilevel optimization, 188–196, 258–281
Bilevel programming, 149–159
Bottleneck model, 293–314, 315–330
Branch and cut, 245–255, 379–393, 503–514

C

Capacity allocation, 33–41
Clustering, 488–502
Column generation, 197–209
Combinatorial optimization, 379–393
Computational analysis, 459–472
Container port terminal, 224–234
Cooperative game theory, 71–85
Cost allocation, 71–85
Crossdocking, 235–244

D

Departure time, 293–314
Directional derivative, 258–281
Dispatching, 224–234
Distribution networks, 174–187
Dynamic assignment, 399–419
Dynamic programming, 107–118, 197–209
Dynamic scheduling, 447–458
Dynamic travel times, 160–173, 420–433
Dynamic vehicle routing, 399–419, 459–472

E

Efficiency, 315–330
Empty freight car distribution, 121–134
Existence of equilibrium, 293–314

F

Fleet assignment, 357–368
Fleet management, 397–398
Fleet size and mix, 1–18
Freight transportation, 42–70, 149–159, 197–209, 235–244

G

Game theory, 315–330
Generalized multiple tour problem, 71–85
Geographical information systems, 188–196

H

Hazardous materials transportation, 188–196
Heterogeneous users, 293–314, 315–330
Heterogeneous vehicles, 71–85
Heuristics, 245–255, 459–472
Highway link, 97–106
Hub, 174–187
Hub insulation, 357–368

I

In Memoriam: Richard W. Rothery, 257
In Memoriam: Denos C. Gazis (1930–2004), 395
In Memoriam: Stefano Pallottino (1945–2004), 396
Insertion heuristics, 369–378, 488–502
Integer programming, 357–368, 379–393, 488–502
Intelligent transportation systems, 135–148
Internet, 397–398
Inventory routing, 210–223, 488–502

L

Large neighborhood search, 515–530
Layered graph, 197–209
Less-than-truckload motor carriers, 235–244
Linear programming, 343–356
Logistics, 42–70, 210–223, 343–356, 434–446

M

Maritime transportation, 1–18
Markov chain, 97–106
Markov decision processes, 473–487
Markov process, 331–342
Material handling, 235–244
Metaheuristics, 174–187, 434–446
Multiclass traffic network equilibrium, 282–292

N

Nested monotonicity, 282–292
Network design, 188–196
Networks, 149–159, 343–356
Noncooperative games, 149–159

O

Online optimization, 434–446
Optimization, 503–514

P

Pedestrian delay, 86–96
Perishable inventory control, 107–118
Pickup and delivery, 245–255, 503–514
Pickup and delivery problem, 420–433, 434–446
Platoons, 86–96
Precedence constraints, 197–209
Public transport, 447–458

R

Rail transportation, 33–41, 379–393
 Railway systems, 33–41
 Real-time, 397–398
 Real-time decision making, 473–487
 Real-time fleet management, 135–148
 Real-time routing, 420–433
 Revenue/yield management, 19–32
 Robust planning, 357–368
 Robustness, 331–342
 Rolling stock planning, 33–41
 Route choice, 331–342
 Routing, 503–514

S

Scalable optimization problems, 343–356
 Schedule delay, 293–314
 Scheduled railways, 121–134
 Sensitivity analysis, 258–281
 Shifts, 369–378
 Ship scheduling, 1–18
 Simulated annealing, 515–530
 Simulation, 434–446
 Stochastic inventory routing, 42–70
 Stochastic processes, 97–106
 Stochastic travel times, 447–458
 Stochastic user equilibrium, 258–281, 331–342
 Supply chain, 397–398

T

Tabu search, 121–134, 174–187
 Time-dependent capacitated network design, 121–134
 Time windows, 369–378, 459–472
 Traffic equilibrium, 258–281, 293–314, 315–330
 Traffic flow modeling, 86–96
 Traffic information systems, 160–173
 Traffic networks, 331–342
 Transportation, 397–398
 Travel time, 97–106
 Traveling salesman, 245–255
 Truckload trucking, 135–148

U

Uniqueness, 315–330
 Uniqueness of equilibrium, 293–314

V

Variable delivery quantities, 210–223
 Variable delivery times, 210–223, 369–378
 Variable neighborhood search, 174–187
 Variational inequalities, 282–292
 Vehicle routing, 71–85, 135–148, 160–173, 473–487, 488–502, 515–530
 Vehicle routing and scheduling, 369–378
 Vehicle scheduling, 447–458

W

Warehouse operations, 434–446
