With 12,500 members from nearly 90 countries, INFORMS is the largest international association of operations research (O.R.) and analytics professionals and students. INFORMS provides unique networking and learning opportunities for individual professionals, and organizations of all types and sizes, to better understand and use O.R. and analytics tools and methods to transform strategic visions and achieve better outcomes. For more information on INFORMS, its publications, membership, or meetings visit <http://www.informs.org>

Subject Index

A

- Algorithm
 - deadheading trip insertion, 338–363
 - estimation of origin/destination trip matrices, 32–49
 - Jordan center of tree, 98–114
 - p -median problem, 175–182
 - mode split-assignment problems, 306–317
 - path center of tree, 98–114
 - traffic assignment problems, 306–317
- Appreciation to referees, 79–81
- Attitudinal analysis, work/school travel, 233–254

B

- Book of interest, 379–381
- Bus scheduling, deficit function, with deadheading trip insertions for fleet size reduction, 338–363
- Bus-stops, spacing of, for many to many travel demand, 210–221

C

- Car size, effect on headways in freely flowing freeway traffic, 364–378

D

- Decomposition algorithm, for p -median problem, 175–182
- Driver behavior, model of, at high speed signalized intersections, 50–61

E

- Emergency medical service vehicle deployment, hierarchical objective set covering model for, 137–152
- Emergency vehicles, urban, dynamic repositioning of, 115–136
- Equilibrium flows, urban freeways, 255–293
- Equilibrium model, asymmetric two-mode, existence and uniqueness properties of, 318–328
- Errata, single facility rectilinear location problem with multiple criteria, 78

F

- Freeway traffic, freely flowing, effect of car size on headways in, 364–378

- Freeways, urban, equilibrium flows on, 255–293

- Fuel consumption characteristics, trip time versus stop time, in cities, 183–209

G

- Garfinkel, Neebe and Rao's LP decomposition for p -median problem, note on, 175–182

I

- Injury severity, statistical aspects of, making allowance for differences in assessment of level of trauma, 297–305

J

- Jordan center, tree, linear algorithms for finding, 98–114

L

- Letter to Editor, note on geometrical solution for some minimax location problems, 164–166
- Location probabilities, optimum, in l_p distance Weber problem, 85–97
- Location problem, dual of linearly constrained multifacility, with arbitrary norms, 329–337

M

- p -Median problem, LP decomposition of Garfinkel, Neebe and Rao, note on, 175–182

Model

- asymmetric two-mode equilibrium, 318–328
- driver behavior at high speed signalized intersections, 50–61
- emergency medical service vehicle deployment, 137–152
- multinomial logit, testing, against multinomial probit model without estimating the probit parameters, 153–163
- nonsignalized pedestrian crossing, 222–232
- probabilities of injury severities, 297–305
- schedule delay and departure time decisions, 62–77

- urban transportation system, 32–49
- Multidimensional transportation problems, direct solutions to, 1–15
- Multifacility location problem, dual of linearly constrained, with arbitrary norms, 329–337
- Multinomial logit model, testing against multinomial probit model, 153–163

O

- Optimal policies, stage construction of transportation facilities, influence of demand-quality interrelationships on, 16–31
- Optimum location probabilities, in l_p distance Weber problem, 85–97
- Origin/destination trip matrices method for direct estimation of, 32–49

P

- Path center, tree, linear algorithms for finding, 98–114
- Pedestrian crossing, nonsignalized, mathematical model of, 222–232

S

- Schedule delay and departure time decisions, in deterministic model, 62–77
- Scheduling, bus, deficit function, with dead-heading trip insertions for fleet size reduction, 338–363
- School travel, attitudinal analysis of, 233–254
- Signalized intersections, high speed, model of driver behavior at, 50–61

T

- Traffic assignment problems, elastic, efficient algorithms for solving, and mode split-assignment problems, 306–317
- Traffic, freeway, effect of car size on, 364–378
- Transportation facilities, stage construction of, influence of demand-quality interrelationships on optimal policies of, 16–31
- Transportation networks, indistinguishable service units, dynamic repositioning of, 115–136
- Transportation problems, multidimensional, direct solutions to, 1–15
- Travel demand, many to many, spacing of bus-stops for, 210–221
- Tree, Jordan center and path center, linear algorithms for finding, 98–114
- Trip matrices, origin/destination, method for direct estimation of, 32–49
- Trip time versus stop time, fuel consumption characteristics and, in cities, 183–209

U

- Urban emergency vehicles, dynamic repositioning, 115–136
- Urban freeways, equilibrium flows on, 255–293
- Urban fuel consumption characteristics, 183–209

W

- Weber problem, 85–97
- Work travel, attitudinal analysis of, 233–254
