

00:47:43 Ananth Raman: Could the carbon footprint of a location changes during the day? At some part of the day, the location might get its electricity from solar, and from gas-fired generators at some other time.

00:48:46 Ananth Raman: I think Ana's graph just answered my question -- there is intraday variation

00:50:30 Ananth Raman: why is the intra-day pattern on carbon intensity so different in the different regions? Midwest US peaks mid-day, Finland peaks at night

01:01:42 Pavithra Harsha: Are there recourse decisions when there are surprises?

01:05:57 Sridhar Tayur: Analog computing as an option?

01:08:18 Nicola Secomandi: Is there any own generation, e.g., compared to what Amazon does?

01:14:47 Pavithra Harsha: What is infrastructure cost? Would that be treated as a capital investment?

01:16:37 nityavyas: What compute resources are used for calculation? Only CPU or more ?

01:19:52 nityavyas: In the example of datacenter, did you drop the load or did you move the load to greener datacenter?

01:21:59 Pavithra Harsha: How do people specify their flexible load currently? Do you know how much time a load will take to complete ?
