

INFORMS TRANSACTIONS ON EDUCATION

Stefan Creemers, Editor-in-Chief | IESEG

INFORMS Transactions on Education (ITE) is a peer-reviewed, open-access journal with the mission to become the flagship journal of education science for operations research (OR), management science (MS), and analytics at all levels worldwide. *ITE* fulfills its mission by publishing research articles on education and learning as well as encouraging creation and facilitating dissemination of classroom-tested pedagogical approaches, case studies, games, puzzles, software, data sets, and other educational materials. The link between research articles and OR/MS/analytics can be dual: papers may either study a topic in OR/MS/analytics education or apply an OR/MS/analytics technique to improve teaching and learning in general (i.e., not limited to instruction in OR/MS/analytics).

The journal also welcomes research articles on education in related fields, including operations management, mathematics, systems engineering, statistics, computer science, artificial intelligence, and machine learning.

Frequency: 3 issues/year (triannual) | eISSN: 1532-0545 (Online) | First Issue: 2000
